- Assignee changed from karthikeyan to Payodhi

Dear sir,

Sophos Firewall firmware version upgradation has been done.

New features

Upgrading through Sophos Central: You can schedule firmware upgrades from Sophos Central for XG Series firewalls 18.0 MR3 and later.
DPI mode: Improved network performance for TLS traffic in DPI mode is now available for all form factors of Sophos Firewall.

Resolved Frag Attack vulnerabilities: We resolved these vulnerabilities recently discovered in the Wi-Fi specification for all internal and add-on Wi-Fi modules for XG series desktop series appliances. All other updates will follow as outlined in this advisory.

Enhanced backup and restore: We've improved backup and restore operations across different models with accurate mapping of the management ports. Additionally, you can restore backups from 18.0 MR5 and earlier to 18.5 MR1. For more information, see the upgrade information section in this set of release notes.

XGS Series reset button: You can press and hold the hardware reset button on XGS Series appliances (XGS 116 and higher models) to reset the firewall to factory configuration. You can use this for troubleshooting and to recover from a bad configuration.

VPN tunnel logging: Improved logging for VPN tunnel flap events and IPsec IKEv2 rekeying.
